

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

1-33. (Previously Canceled)

34. (Currently Amended) A method for electronically presenting bills, comprising:
storing a plurality of bills from a plurality of billers for a payor, each biller being associated with at least one of a plurality of biller categories;
receiving, via a network, a request from a payor to view those of the stored plurality of bills from billers associated with one of the plurality of ~~billet~~ biller categories; ~~and,9 and,~~
transmitting, via the network, only those bills from those billers associated with the one biller category to the payor responsive to the ~~request;~~ request,
wherein at least one of the plurality of biller categories is established by the payor.

35. (Previously Canceled)

36. (Currently Amended) The method of claim 34, wherein the plurality of biller categories includes a category corresponding to at least one of a credit card ~~service and~~ service or a utility service.

37. (Currently Amended) The method of claim 34, wherein each of the stored plurality of bills is associated with one of a plurality of bill categories, and further comprising:

receiving, via the network, a request from the payor to view those of the stored plurality of bills associated with one of the plurality of bill categories; and

transmitting, via the network, only those bills associated with the one bill category to the payor responsive to the request.

38. (Currently Amended) The method of claim 37, wherein the plurality of bill categories includes a disputed bill ~~category~~³, category, a paid bill category, or an unpaid bill category.

39. (Previously Canceled)

40. (Previously Presented) The method of claim 34, wherein at least one of the plurality of billers is associated with more than one of a plurality of biller categories.

41. (Currently Amended) The method of claim 34, further comprising:
receiving, via the network, a request from the payor to view those of the stored plurality of bills from those of the plurality of billers that are unpaid and associated with one of the plurality of biller categories; and

transmitting, via the network, those of the unpaid stored plurality of bills from those of the plurality of ~~billets~~ billers associated with the one biller category to the payor responsive to the request.

42. (Previously Presented) The method of claim 34, further comprising:

receiving, via the network, a request from the payor to view those of the stored plurality of bills from those of the plurality of billers that are paid and associated with one of the plurality of biller categories; and

transmitting, via the network, those of the paid stored plurality of bills from those of the plurality of billers associated with the one biller category to the payor responsive to the request.

43. (Currently Amended) A system for electronically presenting bills, comprising:

a communications port configured to receive and transmit bill related information via a network;

a memory configured to store a plurality of bills from a plurality of billers for a payor, each ~~billet~~ biller associated with one of a plurality of biller categories; and

a processor in communication with the communications port and the memory and configured to 1) receive, via the communications port, a request from the payor to view those of the stored plurality of bills from billers associated with one of the plurality of biller categories, and 2) cause the communications port to transmit only those bills from those billers associated with the one biller category to the payor responsive to the ~~request;~~ request.

wherein at least one of the plurality of biller categories is established by the payor.

44. (Previously Canceled)

45. (Currently Amended) The system of claim 43, wherein the plurality of biller categories includes a category corresponding to at least one of a credit card ~~service~~ and service or a utility service.

46. (Currently Amended) The system of claim 43, wherein:
each of the stored plurality of bills is associated with a bill ~~category~~; and category, and
the processor is further configured to 1) receive, via the communications port, a request from the payor to view those of the stored plurality of bills associated with one of the plurality of bill categories, and 2) cause the communications port to transmit only those bills associated with the one bill category to the payer responsive to the request.

47. (Currently Amended) The system of claim 46, wherein the plurality of ~~biller~~ bill categories includes a disputed bill category, a paid bill category, or an unpaid bill category.

48. (Previously Canceled)

49. (Previously Presented) The system of claim 43, wherein at least one of the plurality

of billers is associated with more than one of the plurality of biller categories.

50. (Previously Presented) The system of claim 43, wherein the processor is further configured to 1) receive, via the communications port, a request from the payor to view those of the stored plurality of bills from those of the plurality of billers that are unpaid and associated with one of the plurality of biller categories, and 2) cause the communications port to transmit those of the unpaid stored plurality of bills from those of the plurality of billers associated with the one biller category to the payor responsive to the request.

51. (Currently Amended) The system of claim 43, wherein the processor is further configured to 1) receive, via the communications port, a request from the payor to view those of the stored plurality of bills from those of the plurality of ~~billers~~ billers that are paid and associated with one of the plurality of biller categories, and 2) cause the communications port to transmit those of the paid stored plurality of bills from those of the plurality of billers associated with the one biller category to the payor responsive to the request.

52. (Currently Amended) A method for electronically presenting bills, comprising:
storing a plurality of bills from a plurality of billers for a payor, each biller being associated with one of a plurality of biller categories;
receiving, via a network, a request from a payor to view those of the stored plurality of bills from billers associated with one of the plurality of biller categories; and

transmitting, via the network, only those bills from those ~~billers~~ billers associated with the one biller category to the payor responsive to the ~~request;~~ request,

wherein at least one of the plurality of biller categories identifies a type of good or service provided by a ~~biller;~~ and biller, and

wherein at least one of the plurality of biller categories is established by the payor.
~~includes biller category defined by a payor.~~

53. (Previously Presented) The method of claim 52, wherein the plurality of biller categories includes a paid or unpaid bill category.

54. (Previously Canceled)

55. (Previously Presented) The method of claim 52, wherein the plurality of biller categories includes a disputed bill category.

56. (Previously Presented) The method of claim 41, further comprising:
receiving, via the network, a single payment request from the payor to pay at least two of the unpaid stored plurality of bills from those of the plurality of billers associated with the one biller category; and
processing the payment request.

57. (Currently Amended) The method of ~~claim 41~~, claim 41, further comprising:
receiving, via the network, a payment request from the payor to pay one or more of the
unpaid stored plurality of bills from those of the plurality of billers associated with the one biller
category; and
processing the payment request.

58. (Previously Presented) The system of claim 50, wherein the processor is further
configured to 1) receive, via the communications port, a single payment request from the payor to
pay at least two of the stored plurality of bills that are unpaid and associated with the one biller
category, and 2) process the payment request.

59. (Currently Amended) The system of claim 50, wherein the processor is further
configured to 1) receive, via the communications port, a payment request from the payor to pay
one or more of the stored plurality of bills that are unpaid and associated with the one ~~biller~~ biller
category, and 2) process the payment request.

60. (Currently Amended) A system comprising:
means for storing a plurality of bills from a plurality of ~~billers~~ billers for a payor, each
biller being associated with at least one of a plurality of biller categories;
means for receiving, via a network, a request from a payor to view those of the stored
plurality of bills from billers associated with one of the plurality of biller categories; and

means for transmitting, via the network, only those bills from those billers associated with the one biller category to the payor responsive to the request;

wherein at least one of the plurality of biller categories is established by the payor.
